

China macro update:

Policy outlook for the Year of the Pig

February 2019

Questions about China's growth trajectory are still prevalent as we step into the Year of the Earth Pig. However, there are a couple of things that are hinting toward Chinese policymakers easing more monetary and fiscal policies to buffer an economic slowdown while implementing adequate measures to address some of its long-term structural issues such as the role of private sector in the country's economic transformation.

“Be not afraid of growing slowly; be afraid only of standing still.”

- Chinese proverb of unknown origin

Ten years and several economic cycles since the global financial crisis, China finds itself facing a familiar situation – slowing growth brought on by factors not entirely within its control. But this time around policymakers intend to tighten up cyclical growth without falling back on debt-fueled stimulus (such as the RMB4 trillion stimulus package in 2008). They plan to do this while attempting to strike a balance between maintaining growth stability and advancing structural reforms.

Amid few signs of a turnaround in the economy and rising risks that the downdraft in growth will begin to weigh on the labor market, managing the growth cycle has become the top policy priority for the Chinese government.

Amid few signs of a turnaround in the economy and rising risks that the downdraft in growth will begin to weigh on the labor market, managing the growth cycle has become the top policy priority for the Chinese government. As a result, since late 2018, we have seen a slew of intensifying and broadening policy measures and a shift in focus from the deleveraging narrative that dominated 2017 and H2 2016.

Monetary measures: As headwinds to growth and confidence gather, the People’s Bank of China (PBoC) in early-January cut the reserve requirement ratio (RRR) for large commercial banks by 100 basis points (bps), after reducing it by 250bps last year. We expect further liquidity easing, including RRR cuts, to encourage bank lending, buy corporate bonds, as well as accommodate more proactive fiscal policy and increased local government bond issuance.

The focus of monetary policy remains on improving the transmission mechanism and facilitating banks to pass on the lower interbank funding costs to corporate and household borrowers. The PBoC will likely continue to use re-lending and re-discounting, targeted medium-term lending facility (TMLF) and other liquidity facilities. Additionally, it should support the use of credit risk mitigation instruments and other credit enhancements to lower funding costs for SMEs and facilitate corporate bond issuance. The PBoC launched a Central Bank Bills Swap (CBS), which may help banks by improving the appeal of perpetual bonds, supporting their capital replenishment and allowing them more liquidity to lend. In addition, the debt-to-equity swap program could be accelerated, aimed at freeing up more funds for bank lending. Efforts to build multi-layer capital markets for financing will continue. The new wealth/asset management product regulations may be relaxed further to ease the contraction of off-balance-sheet credit.

Fiscal policy will remain in the driver’s seat, with a wider fiscal deficit and a larger quota for local government special bond issuance.

Focus on Fiscal: Fiscal policy will remain in the driver’s seat, with a wider fiscal deficit and a larger quota for local government special bond issuance. The government is likely to roll out a sizeable tax and fee cut, with the reduction expected to reach the equivalent of, or even surpass, 1% of GDP. It has already cut the value-added tax (VAT) by 1 percentage point last May and implemented the individual income tax reform, including the increase in standard deduction in October 2018 and then introduced a special deduction in January 2019, benefiting low-income households in particular.

Beyond the VAT cuts, there is ample room to further reduce the corporate tax burden, such as mandatory social security contributions. The approval of infrastructure projects has accelerated since the fourth quarter of 2018. The advanced quota for 2019 special government bond issuance will help to mitigate near term risk of weakening infrastructure FAI.

Property policy fine-tuning: Given the resilience in housing market activity, a large scale property policy loosening led by the central government looks unlikely, but there has been policy fine-tuning in some cities. Broader policy easing is likely should there be signs of a significant market correction. Funding conditions for developers generally remain tight, but recent moves by authorities to loosen their regulatory grip on the onshore funding market has helped.

The easing so far in this cycle has been milder, and more selective than in the last periods of significant growth risks.

Policy effectiveness remains key: Investor skepticism toward China's growth outlook is largely focused on the seeming lack of policy effectiveness so far. There tends to be some time lag for the feed-through of policy easing to be reflected on the hard data. The easing so far in this cycle has been milder and more selective than in the last periods of significant growth risks. The need to maintain a tight lid on financial stability risks is a key constraint. Local governments are reluctant to raise spending significantly despite increased financing as they face other constraints such as debt sustainability.

There is also less ammunition than before as debt levels are higher (both local government debt and private sector leverage), the fiscal deficit wider (particularly taking into account the off-budget funding gap), interest rates lower and the current account surplus narrower than at the onset of the last slowdown.

Importantly, low private sector confidence has weakened policy/credit transmission amid an uncertain domestic and external environment and doubts about the government's willingness and ability to push through structural reforms. Corporate credit demand for capex remains subdued and banks are reluctant to increase lending, particularly to SMEs, despite liquidity easing (bank lending is constrained by capital requirements) with default/asset quality concerns.

We expect pro-growth policy measures to eventually help restore confidence and stabilize cyclical growth prospects.

Be not afraid...We expect pro-growth policy measures to eventually help restore confidence and stabilize cyclical growth prospects. A rebound in private sector confidence, driven for example by improvements in US-China trade relations, clear signs of stabilization in the Chinese economy, real progress in market-oriented reforms such as SOE reform on the basis of 'competitive neutrality' to create environment for fair competition, etc. could potentially kick-start a positive feedback loop in the near term. However, US-China trade talks remain a wild card for better or worse outcomes. Policy effectiveness (e.g., credit transmission, the multiplier for corporate tax cuts, etc.) remains key to the outlook.

There is no assurance that a portfolio will achieve its investment objective or will work under all market conditions. The value of investments may go down as well as up and you may not get back the amount originally invested. Portfolios may be subject to certain additional risks, which should be considered carefully along with their investment objectives and fees. **Foreign and emerging markets.** Investments in foreign markets involve risks such as currency rate fluctuations, potential differences in accounting and taxation policies, as well as possible political, economic, and market risks. These risks are heightened for investments in emerging markets which are also subject to greater illiquidity and volatility than developed foreign markets. **Real Estate** investments are subject to many of the risks associated with direct real estate ownership, such as changes in economic conditions, credit risk, property taxes, zoning laws, and interest rate fluctuations. **Non-diversification** occurs when portfolio assets are invested in fewer securities, industries, currencies or countries than in diversified investment portfolios, Non-diversification increases risk because each investment has a greater effect on portfolio performance and can also be affected by single economic, political or regulatory occurrences. **Geographic concentration** occurs when a portfolio concentrates its investments in one country or region. Portfolio performance is expected to be closely tied to the social, political, and economic conditions in that country or region, and may therefore be more volatile than the performance of more geographically diversified funds. **Commodity-related investments.** Exposure to commodities markets, including investments in companies in commodity-related industries, may subject a fund to greater volatility than investments in traditional securities. The value of commodity-related investments may be affected by overall market movements and factors specific to a particular industry or commodity. **Liquidity.** The markets in which the fund can invest may occasionally be affected by a lack of liquidity. These markets disruptions can have an impact on the price levels.

There are important differences in how the strategy is carried out in each investment vehicle. A separately managed account may not be suitable for all investors and a minimum asset level is required. Please refer to the Form ADV Part 2A for important information about the investment adviser.

US persons (both entities and individuals) are subject to US taxation on their worldwide income and may be subject to tax and other filing obligations with respect to their US and non-US accounts. The Foreign Account Tax Compliance Act (FATCA) is a US law designed to prevent the use of non-US accounts or non-US entities to avoid US taxation of income and assets. To meet this objective, FATCA imposes on US and non-US entities certain documentation, due diligence, withholding and reporting requirements with respect to accounts and certain payments. Investors should consult their independent tax advisors about investment tax implications.
