

HSBC Global Management

ESG Responsible Investing

We connect the developed and developing worlds to unlock sustainable investment opportunities for our clients. This means connecting investors with businesses that are creating a sustainable future for themselves and others. Taking a wider view of the issues that create risk and return. This incorporates extensive and complex environmental, social and governance issues that can have a significant impact on financial performance from climate change to inequality, competence, corruption and more. Regulation is changing to safeguard investors from the risks created by this rapidly changing world.

Since its launch, the United Nations-sponsored Principles for Responsible Investment has identified over 400 regulatory interventions around ESG issues that have the potential to significantly impact investment. For example, climate change is at the forefront of everyone's mind and is high on the list of long-term investment risks it's a complex landscape, and investors need guidance to avoid potential pitfalls and to identify new opportunities. We aim to manage risks and capture opportunities by integrating Environmental, Social and Governance research and analysis into all our investment strategies, analyzing individual companies in the context of their sector to understand them better, taking the time to establish how they meet ESG criteria today and how they could better meet them in the future. Creating a sustainable future for themselves and others.

We disclose our voting publicly and report on our stewardship activity, helping our clients stay informed by speaking with regulators, policy makers, and other stakeholders that are shaping a changing world. We take our stewardship responsibilities seriously, with a focus on leading by example, helping to build a more sustainable, robust financial system that is better equipped to tackle the challenges we face, making our clients' portfolios more resilient for tomorrow.
